

# Battery Maintenance Made Easy

The material handling fleet is an essential ingredient to any business, ranging from the humble pallet truck to counter balance and VNA, maintaining the battery is a key element to an efficient operation.

Correct battery maintenance is proven to prolong battery life, extend the operational life of your material handling fleet and reduce costly repairs.

Allow WB Powersource to remove the stress of maintaining your battery fleet by using our range of battery maintenance programs, increasing your peace of mind and ensuring that batteries are correctly maintained, topped up and repaired should any damage occur during their busy shifts.

By using our fully trained and experienced engineers to maintain your batteries on site we can also offer guidance as they near end of life, so you can budget accordingly to keep your warehouse running smoothly.

When the unexpected does occur rest assured WB Powersource have you covered by our Nationwide coverage.

Our first priority is to achieve a first time fix and to this end our engineers hold a comprehensive van stock of many components and cells to reduce downtime to a minimum.

All of our engineers hold latest copies of our RAMS, H & S policies and all are equipped with relevant PPE. We operate with electronic service software to provide "as it happens" updates to our customers, along with "before and after" pictures to show all work undertaken, keeping you in the loop at all times.

Contact us for more details today or to arrange a site survey to see how we can help you reduce your operating costs and increase the life of your MHE batteries.
